CYBERCULTURE (ELECTRONIC MEDIATIONS) BY PIERRE LE?VY PDF

Needing guidance and seeking insight, the Council of Europe approached Pierre Lévy, one of the world's most important and well-respected theorists of digital culture, for a report on the state (and, frankly, the nature) of cyberspace. The result is this extraordinary document, a perfectly lucid and accessible description of cyberspace—from infrastructure to practical applications—along with an inspired, far-reaching exploration of its ramifications. A window on the digital world for the technologically timid, the book also offers a brilliant vision of the philosophical and social realities and possibilities of cyberspace for the adept and novice alike.

In an overview, Lévy discusses the distinguishing features of cyberspace and cyberculture from anthropological, philosophical, cultural, and sociological points of view. An optimist about the future potential of cyberspace, he eloquently argues that technology—and specifically the infrastructure of cyberspace, the Internet—can have a transformative effect on global society. Some of the issues he takes up are new art forms; changes in relationships to knowledge, education, and training; the preservation of linguistic and cultural differences; the emergence and implications of collective intelligence; the problems of social exclusion; and the impact of new technology on the city and democracy in general.

In considerable detail, Lévy describes the ways in which cyberspace will help promote the growth of democracy, primarily through the participation of individuals or groups. His analysis is enlivened by his own personal impressions of cyberculture—gathered from bulletin boards, mailing lists, virtual reality demonstrations, and simulations. Immediate in its details, visionary in its scope, deeply informed yet free of unnecessary technical language, *Cyberculture* is the book we require in our digital age.

Pierre Lévy is professor of cyberculture and social communication at the University of Quebec and consultant to the Forward Studies Unit of the European Union on issues of governance and electronic democracy. His many books include *Becoming Virtual* (1998) and *Collective Intelligence* (1999). Robert Bononno, a teacher and translator, lives in New York City.

Loses in Translation, But Opening Act for a Genius

By Robert David STEELE Vivas

Pierre Levy writes in French and it gets translated into English. I have met him and studied his work and consider him one of the top minds in what is emerging out of cyberculture, the World Brain. His Information Economy Meta Language has enormous potential

Overly optimistic technoevangelism

By Christopher Berg

Levy's book is a perfect example of the kind of technoevangelism that caused the dotcom crash. He seems to accept - at face value - every prognostication tossed out by Wired in the early 1990s. The scholarship is weak and overreaches, and the perspective he takes seems to deny the possibility that the digital will constrain even as it affords - something made very clear in the work of Lawrence Lessig.
